Early Learning

Environmental Sustainability Policy

To view the full version of this policy (including attachments); please speak to the staff at your early learning service.

Overarching Statement

The Keeping Children Safe Policy of the Uniting Church in Australia Synod of Victoria and Tasmania (refer to Reference/sources) is the overarching whole of church policy to be implemented by individuals and entities involved with or connected to the Uniting Church. All children who are involved in any of the Church’s activities, events or programs have a right to feel and be safe. The Church is committed to provide safe environments where children are cared for, respected, nurtured and sustained.

Policy Statement

Uniting Early Learning is committed to:

- Supporting children to develop a sense of place, identity and connection to the land, and where possible influencing the community about the same;
- promoting respect for, and an appreciation of, the natural environment among all at the service;
- fostering children’s capacity to understand and respect the natural environment, and the interdependence between people, plants, animals and the land;
- supporting the development of positive attitudes and values in line with sustainable practices;
- ensuring that educators and other staff engage in sustainable practices during the operation of the service.

Executive Summary

Current research confirms that experiences in the early years help establish lifelong behaviour and values, and this reinforces the need for environmental sustainability education to be included in early childhood programs. It is important for children to understand their place in the world and the role that they can play in protecting the environment. Children should learn to be environmentally responsible and be empowered to make a difference, and this learning should not wait until the ‘formal education’ of primary school.

Children and educators can take an active role in caring for the environment and contributing to a sustainable future, by developing local and meaningful strategies and embed these practices into day-to-day operations (refer to Attachment 16b).

Environmental awareness as a platform for ongoing environmental education, will be developed by services and the community, and provide natural and living materials in the environment, to support children to use all of their senses, and experience and understand seasons and life cycles. Considering children’s level of understanding and development, as future caretakers of our environment, educators will encourage positive attitudes and individual and collective responsibility for day-to-day and long term sustainability.
The curriculum will promote environmental education and foster children’s wonder and knowledge about the natural world. With a focus on open-ended play opportunities, science and nature experiences will be integrated into the daily program so that children develop the positive knowledge, skills and values required when understanding and caring for their environment.

Information and resources will be shared with families to create and support environmental awareness and minimise the impact of human activities on environments.

**Current Environmental Context**

The Early Childhood Australia *Code of Ethics* (2016) requires early childhood professionals in relation to children to “collaborate with children as global citizens in learning about our shared responsibilities to the environment and humanity”.

Learning Outcome 2 in the *Victorian Early Years Learning and Development Framework* (2016) guides and supports a collaborative approach between professionals, parents and children where, children “are connected with and contribute to their world” and “broaden their understanding of the world in which they live”.

Early childhood professionals in collaboration with families are responsible for scaffolding children’s learning to develop an environmental identity and consciousness. Maximising children’s engagement with the outdoor environment, and integrating access between the indoors and the outdoors, will enable children to actively engage and explore nature and diversify their play experiences. Intentional and planned learning spaces that promote the: development of life skills; such as growing and preparing food, waste reduction, minimising consumption and recycling, and use of recycled, reclaimed, improvised, and natural materials will encourage deeper thinking and leverage learning to promote sustainable environmental habits.

Uniting Early Learning also have a responsibility to align service practice with the organisational wide environmental sustainable policy. This will include practices and behaviours that support activities which contribute to environmental sustainability by reducing waste, pollution and greenhouse gases, the ethical purchasing of products and assisting to moderate the impact of climate change. This includes the commitment to use the Reduce, Reuse and Recycle philosophy as a guide to monitor current practices and implement changes. A priority to energy efficient alternatives when considering lighting, building products and design will also be considered.
