

## Early Learning Water Safety Policy

### Policy Statement

Uniting Early Learning is committed to:

- providing opportunities for children to explore their natural environment including through water play;
- ensuring that children are protected from the risks associated with drowning or non-fatal drowning experiences;
- ensuring that curriculum planning incorporates water safety awareness;
- providing information to educators, staff, parents, volunteers and others at the service about water safety.

### Executive Summary

Water safety relates to access to water in a building, a playground or when on excursions, and also to the availability of drinking water for children. All staff at the service have a responsibility to ensure the indoor and the outdoor learning environments are safe with regard to water related hazards (such as nappy buckets, pools, outdoor equipment, puddles). Water hazards that are not able to be adequately supervised at all times must be isolated from children by a child-resistant barrier or fence, or if a receptacle then emptied of water.

Adequate supervision of all children at the service must be ensured at all times and in keeping with duty of care responsibilities. An educator with a current approved first aid qualification will be in attendance and immediately available at all times children are attending the service.

### Current Environmental Context

The supervision and safety of children with and around water is of paramount importance.

Learning spaces and environments should offer an array of possibilities and connect children with natural materials. Water is one experience that offers children sensory-rich, open-ended experiences that engage their curiosity and imagination. Children may encounter these resources in the service environment and/or when on excursions. These experiences, especially those conducted with and near water, will be carefully supervised ensuring the safety of children and adults. It is imperative that educators remain vigilant in their supervision of children in and around water, and are alert to potential risks in everyday practice in the learning environment.

Drowning is a leading cause of death for children in Victoria, with infants and toddlers the group most at risk. Non-fatal drowning incidents can result in permanent brain damage and disability. Knowledge of potential hazards associated with water will assist educators to provide a safe, stimulating environment for preschool children.

Drowning hazards include large bodies of water such as swimming pools, rivers, creeks, dams and ponds. Smaller bodies of water, including nappy buckets, water containers, outdoor equipment, pet water bowls and poor drainage which allows water to collect can also present drowning hazards for young children. Children can drown in as little as a few centimetres of water.

Keep Watch is a public education program of Royal Life Saving Society – Australia, aimed at preventing the drowning deaths of children under 5 years of age in all aquatic locations. The program has four key actions:

- supervise children constantly around water
- restrict access to water hazards by using child-proof barriers and fences
- provide water awareness training to children
- resuscitation saves lives – ensure that staff have completed current first aid training.

Parents should be informed about the *Water Safety Policy* on enrolment; they also have a responsibility to inform themselves about water safety, ensuring their children understand the risks associated with water.
